

BuyNothing App Use Cases

Our app is a community based sharing app where users can post items they want to give away and request available items from other users. Two of the most important use cases are:

1. Post an item as a gift
2. Request an available item

Category	Description
Use Case Name	Post an Item as a Gift
Actors	Registered User
Description	A user posts an item that they want to give away for free. They enter item details such as description, category, condition, etc, and attach a photo of it. The system then saves the item and makes it visible to other users in the community
Data	Item title, description, category, condition, photo, location
Stimulus	User selects "Post Item" button/option
Response	The system confirms that the item has successfully been posted
Comments	The user must be logged in and required fields must be completed before the item can be posted

Objects Required:

1. User
2. Post Item Page
3. Authentication System
4. Item Controller
5. Item Database
6. Image

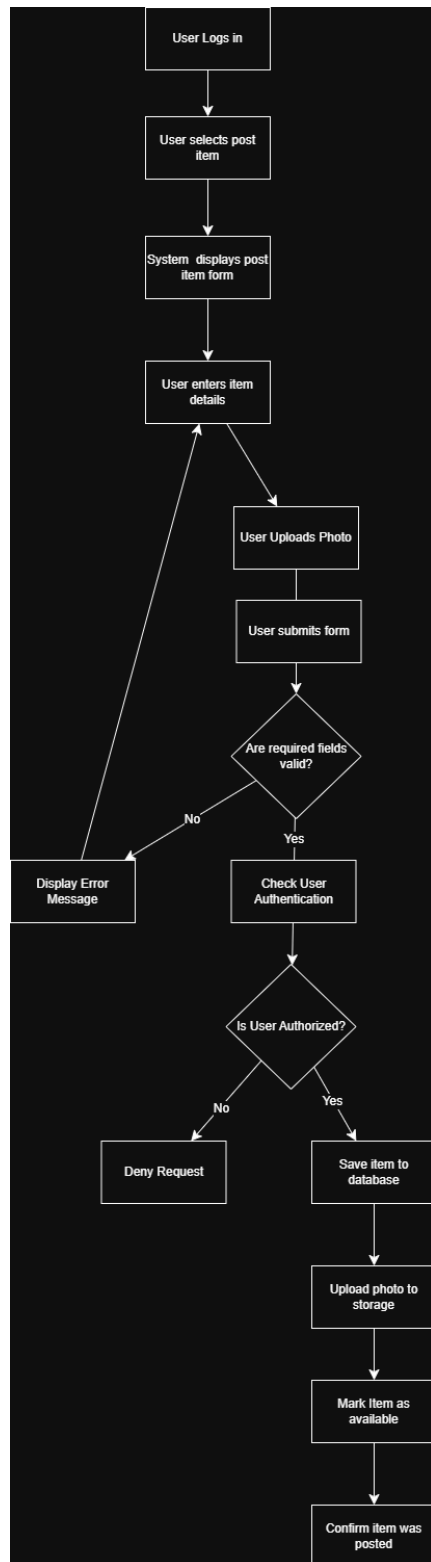

Category	Description
Use Case Name	Request an Available Item
Actors	Registered User and Item Owner
Description	A user views an available item and sends a request to the owner. The system then checks if the item is still available and then

	saves the request. The owner then is notified that a user is interested in the item
Data	Requester ID, Owner ID, message, item status
Stimulus	User selects "Request Item" on available item
Response	The system confirms the request has been sent
Comments	The user must be logged in and the item must be available

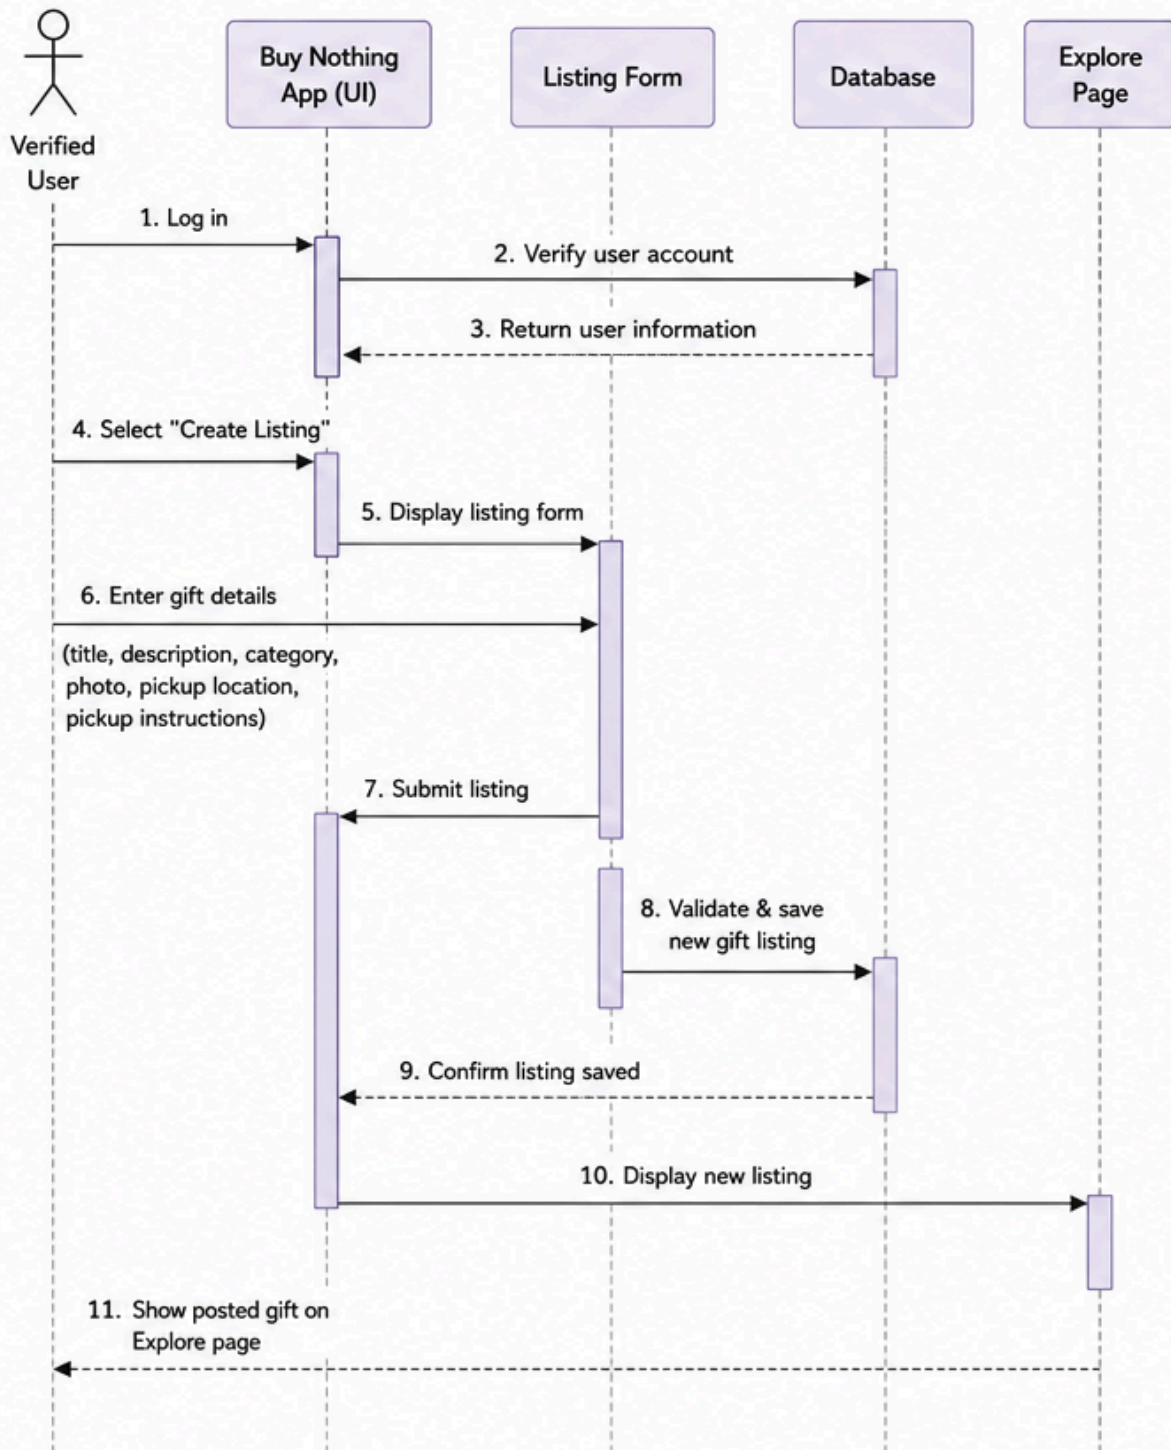

Objects Required:

7. Requester
8. Item Details Page
9. Authentication System
10. Request Controller
11. Item Database
12. Notification System
13. Item Owner
